

SecureAuth®

For salesforce.com®

SecureAuth strong authentication and provisioning platform for salesforce.com

Easier on the end user

- SSO between both internal and cloud applications.
- User self service, password reset or change personal data like a phone number

Simple, less expensive to deploy and administer

- A fraction of the cost of hard tokens like RSA SecurID
- Quickly provision users

More Secure

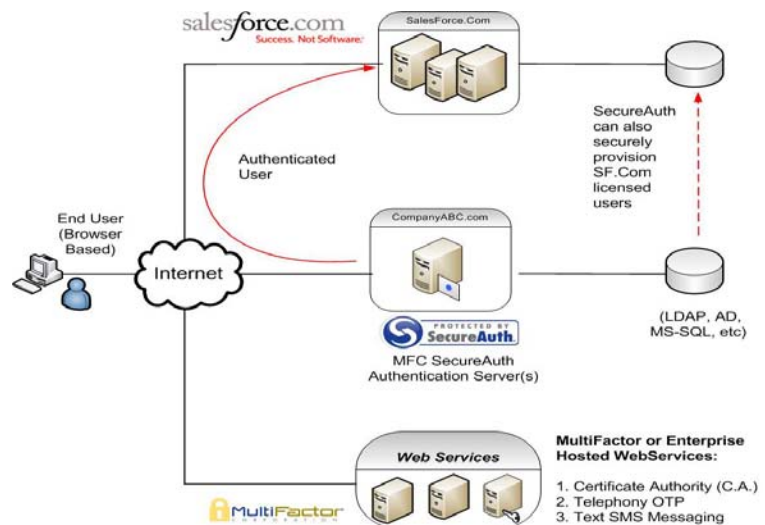

- SecureAuth leverages enterprise data store, AD and LDAP
- 2-factor authentication to salesforce.com
- Users can also be provisioned from enterprise store
- GUI integration for salesforce SAML
- Identity Management features include Help Desk Support, User Self-Service, Password Reset
- Enables enterprise to become full service Identity Management (IdM) facility

Securely Bridging the Enterprise and the Cloud

SecureAuth enables you to securely control access to salesforce.com. It is a cost effective strong authentication product that uniquely enables an enterprise to retain important authentication information at the enterprise, and authenticate users locally, but also apply the authentication to salesforce.com. SecureAuth can also be used to easily provision your users to the salesforce.com data store.

How does SecureAuth for salesforce.com work?

By providing both the authentication and the provisioning to salesforce.com the SecureAuth solution extends the enterprise SSO solution from the enterprise to the cloud. SecureAuth utilizes the native enterprise data store for both membership and profile information. SecureAuth for salesforce.com brings enterprise grade security to the cloud application and while giving the enterprise customer full control of security, identity and access.
